EXPERIENCE

Engineering Officer | University of Utah Game Design Club | April 2026 - Present

Designed Unity workshops for club members covering procedural generation, local/online multiplayer, and designing clean project frameworks in the form of making a rhythm game. Built an AI agent and Python program using Pandas and the Google Sheets API to streamline game jam team matchmaking.

Software Developer | University of Utah Robotics Team | Sept 2024 - May 2025

Improved robot control UI and simulation in Godot with clearer layouts, intuitive visuals, and pathing indicators. Built a camera-based map visualizer for robot data.

Software Lead Programmer | TKA Robotics Team | Sept 2022 - March 2024

Collaborated with cross-functional teams to design, build, and program a competition-ready robot for FIRST Tech Challenge. Developed Java code using OpenCV for object detection. Led workshops on the FTC Java SDK and mentored junior programmers. Presented technical designs to judges and programmed a robot to launch T-shirts at school rallies.

PROJECTS

[Prawn Brawl Game](#) | **Godot Game Engine** University of Utah | Jan 2026

- Designed and coded the menu interfaces and game UI
- Implemented a local multiplayer system with seamless support for keyboard and gamepad controls.
- Designed a flexible game framework to simplify adding new game modes and mechanics.

[Broke The Storm Game](#) | **Godot Game Engine** University of Utah | Feb 2025

- Developed player controls with core fishing mechanics.
 - Built a flexible dialogue system that changes character interactions based on game conditions.
- Built a fish class system supporting unique fish types with customizable properties such as color, size, price, and habitat.

[Sprite Editor](#) | **C++ QT** University of Utah | April 2026

- Designed the editor user interface
- Implemented the sprite canvas, canvas cursor, paint and eraser tool
- Collaborated with a team using the waterfall development methodology

[Goblins Machinima Project](#) | **Unreal Engine** University of Utah | April 2026

- Designed vfx elements (magic beam, explosion, ice) using Unreal Engine's Niagara particle system and material editor.
- Modeled 3d models using Blender.
- Integrated hard surface models and vfx into animation using Unreal Engine's sequencer.

[Sticky Situation](#) | **Unity Game Engine** Carnegie Mellon Nat'l High School Game Academy | Aug 2021

- Developed 2D active ragdoll physics for generating player movement.
- Implemented player abilities including shooting, grappling, and shielding.
- Designed and programmed the main menu and level selection interface.
